

Course Description

Recent high profile information security breaches and the value of information are highlighting the ever increasing need for organizations to protect their information. An Information Security Management System (ISMS) is a controlled approach to managing sensitive company information so that it remains secure. It encompasses people, processes and Information Management Security Systems.

The objective of this information security training course is to provide delegates with the necessary skills and tools to implement an Information Security Management System that meets the certification requirements of ISO 27001:2005 and is based on the code of practice defined by ISO 17799. The information security training course will prepare delegates for the ISO 27001 Lead Implementer Certificate and provide delegates with useful tools and a reference framework for implementation.

Who Should Attend
